

BRIGHT TV ANALYSIS

Prepared by
Nonofo Sebako

INTRODUCTION

DASHBOARD PROJECT AND ITS PURPOSE.

DASHBOARD OVERVIEW – SUMMARY OF THE MAIN KPIS AND OVERALL VIEWERSHIP PERFORMANCE.

CHANNEL PERFORMANCE – ANALYSIS OF TV CHANNEL VIEWS, WATCH TIME, AND AUDIENCE ENGAGEMENT.

VIEWER BEHAVIOUR – EXAMINATION OF VIEWING PATTERNS, PEAK VIEWING HOURS, AND VIEWING TRENDS.

AUDIENCE SEGMENTS – ANALYSIS OF VIEWERS BY REGION, AGE GROUP, GENDER, AND OTHER DEMOGRAPHICS.
KEY INSIGHTS

RECOMMENDATIONS.

CONCLUSION

QUESTIONS & DISCUSSION.

INTRODUCTION

Introduction

The television industry generates large volumes of viewing data every day, making it essential for organizations to analyse this information to better understand audience behaviour and improve decision-making. This project focuses on the **Bright TV dataset**, with the aim of developing an interactive dashboard that provides meaningful insights into TV viewership patterns using **Google Looker Studio (Data Studio)** and **Microsoft Excel**.

DASHBOARD PROJECT AND ITS PURPOSE

- **Dashboard Project and Its Purpose**
- The **Bright TV Dashboard** project was developed to analyse the Bright TV dataset using **Google Looker Studio** and **Microsoft Excel**. The dashboard transforms raw TV viewership data into interactive visualizations that help users understand viewing trends and performance.
- The purpose of the project is to monitor **viewer behaviour**, evaluate **channel performance**, identify **peak viewing times**, and analyse **audience demographics** such as age, gender, and region. The insights generated from the dashboard support data-driven decision-making, enabling Bright TV to improve content scheduling, increase viewer engagement, and optimize marketing strategies.

DASHBOARD OVERVIEW

CHANNEL PERFORMANCE – ANALYSIS OF TV CHANNEL VIEWS, WATCH TIME, AND AUDIENCE ENGAGEMENT.

VIEWER BEHAVIOUR – EXAMINATION OF VIEWING PATTERNS, PEAK VIEWING HOURS, AND VIEWING TRENDS.

7

AUDIENCE SEGMENTS – ANALYSIS OF VIEWERS BY REGION, AGE GROUP, GENDER

8

RECOMMENDATIONS.

Based on the findings, Bright TV should:

- Schedule premium content during peak viewing hours.
- Promote programs on the highest-performing channels.
- Create targeted content for the largest audience segments.
- Increase marketing in regions with lower viewership.
- Strengthen social media campaigns to improve audience engagement.
- Monitor channel performance regularly using the dashboard.

CONCLUSION

- The Bright TV Dashboard successfully transforms raw viewership data into meaningful business insights. Through interactive visualizations, KPI metrics, and audience analysis, the dashboard enables stakeholders to monitor performance, understand viewer behaviour, identify trends, and make data-driven decisions that improve programming, marketing strategies, and overall audience engagement.

QUESTIONS & DISCUSSION

- **1. What was the objective of this project?**
 - **Answer:** To analyse the Bright TV dataset and build an interactive dashboard that provides insights into viewer behaviour, channel performance, peak viewing times, and audience demographics.
- **2. Why did you use Looker Studio?**
 - **Answer:** Because it creates interactive dashboards with easy-to-use filters and clear visualizations for data analysis.
- **3. Why was the dashboard also created in Excel?**
 - **Answer:** To meet the project requirements and provide the same analysis using Pivot Tables, Pivot Charts, KPI cards, and slicers.
- **4. What KPIs did you include?**
 - **Answer:** Total Viewing Records, Total Viewing Hours, Average Watch Duration, Number of TV Channels, and Top Performing TV Channel.
- **5. What were the key findings?**
 - **Answer:** Peak viewing occurs at certain times, some channels perform better than others, and viewer behaviour varies by age, region, and day of the week.
- **6. What recommendations did you make?**
 - **Answer:** Schedule content during peak hours, focus on top-performing channels, and target key audience groups with tailored content.
- **7. Why did you use different chart types?**
 - **Answer:** Each chart was chosen to best display the data—for example, line charts for trends, bar charts for comparisons, and pie charts for proportions.
- **8. How can this dashboard help the business?**
 - **Answer:** It supports better decisions about programming, marketing, advertising, and audience engagement through data-driven insights.
- **9. What challenges did you face?**
 - **Answer:** Cleaning the data, selecting the right visualizations, and ensuring consistency between Looker Studio and Excel.
